

fmasanori@gmail.com

Estou deixando os discos de vinil. Vocês podem me ajudar a escrever meu software?

```
from tkinter import *
import pygame.mixer
app = Tk()
app.title('DJ Mix')
app.geometry('250x100+200+100')
som = '50459 M RED Nephlimizer.wav'
mixer = pygame.mixer
mixer.init()
def start():
    track.play(loops = -1)
def stop():
    track.stop()
track = mixer.Sound(som)
start botão = Button(app, command = start, text = 'Start')
start botão.pack(side = LEFT)
stop botão = Button(app, command = stop, text = 'Stop')
stop botão.pack(side = RIGHT)
app.mainloop()
                       DJ Mix 01.pyw
```

## Mas a música não termina...

```
from tkinter import *
import pygame.mixer
app = Tk()
app.title('DJ Mix')
app.geometry('250x100+200+100')
som = '50459 M RED Nephlimizer.wav'
mixer = pygame.mixer
mixer.init()
def start():
    track.play(loops = -1)
def stop():
    track.stop()
def termina():
    track.stop()
    app.destroy()
track = mixer.Sound(som)
start botão = Button(app, command = start, text = 'Start')
start botão.pack(side = LEFT)
stop botão = Button(app, command = stop, text = 'Stop')
stop botão.pack(side = RIGHT)
app.protocol('WM DELETE WINDOW', termina)
app.mainloop()
```

DJ Mix 02.pyw

Não dá para ter apenas um botão? Tipo liga/desliga?

```
from tkinter import *
import pygame.mixer
app = Tk()
app.title('DJ Mix')
app.geometry('250x100+200+100')
som = '50459 M RED Nephlimizer.wav'
mixer = pygame.mixer
mixer.init()
def termina():
    track.stop()
    app.destroy()
def muda():
    if tocando.get() == 1:
         track.play(loops = -1)
    else:
         track.stop()
track = mixer.Sound(som)
tocando = IntVar()
tocar = Checkbutton (app, variable = tocando, command = muda, text = som)
tocar.pack()
app.protocol('WM DELETE WINDOW', termina)
app.mainloop()
```

Ficou legal, agora vamos colocar um volume!

```
from tkinter import *
import pygame.mixer
app = Tk()
                                                Tirando geometry o tkinter automaticamente
app.title('DJ Mix')
som = '50459 M RED Nephlimizer.wav'
                                                irá decidir o melhor tamanho
mixer = pygame.mixer
mixer.init()
def termina():
    track.stop()
    app.destroy()
def muda():
    if tocando.get() == 1:
        track.play(loops = -1)
    else:
        track.stop()
def muda volume(v):
                                       Função que muda o volume, por enquanto
    track.set volume(volume.get())
                                       não irei usar o parâmetro v
track = mixer.Sound(som)
tocando = IntVar()
tocar = Checkbutton (app, variable = tocando, command = muda, text = som)
tocar.pack(side = LEFT)
volume = DoubleVar() Equivalente tkinter do float, from para diferenciar do from python
volume.set(track.get volume())
escala = Scale(variable = volume, from = 0.0, to = 1.0, resolution = 0.1,
                command = muda volume, label = 'Volume', orient = HORIZONTAL)
escala.pack(side = RIGHT)
app.protocol('WM DELETE WINDOW', termina)
app.mainloop()
```

DJ Mix 04.pyw

## Recordação

- app.destroy()
- DoubleVar()
- Checkbutton()
- Scale()
